### Change is possible

We are going to fall into a deep abyss. All data of real economy and politics bring to this conclusion. Consumption of essential goods and services decreases, production drops, unemployment and poverty figure rises all over the world. National governments and international organisations can't do anything but get states and peoples into debt. Their only aim is to try to save the system and above all its leadership: banks, multinationals, bureaucracies, and armies. The rest are only words and announcements without any concrete effect.

We are at the end of a historical process that has been lasting for thousands of years. It's made up of violence, misuses, undue expropriations, pretences, deceptions and illusions that have involved humanity and the entire planet. Exploitation of work and of the weak, concentration of wealth, poverty, misery, ignorance, corrupted information, destruction of natural resources and environment. Who has tried to rebel has been absorbed or eliminated. And now, the only solution of the elite for repeating the process that has brought us to this point seems to be decimation. Fewer mouths, fewer brains, fewer hands. This can be the only solution to block the change.

But, it will not be so. This time the minority that has the power will not be able to prevent the majority of humanity from defending themselves, from reacting and from self-organizing. Because, this time there will be the means to do what everybody considers right, but that nobody has ever managed to put into practise. There is the [Republic of the Earth](#), the democratic government system of the entire population of the planet in order to establish peace. There is [Dhana](#), the currency with real value issued on behalf of workers to be assigned in equal parts to redistribute equally wealth and eliminate new concentrations. There is [Balaloka](#), the security force of the Republic of the Earth. There is [Kyberpay](#), multicurrency system for any payment. There is [Parasparam](#), first corporation with capital in Dhana. There is [Equalizing](#), resources to promote productive investments. There is [Holos Global System](#), a programme of concrete initiatives to face the most felt and urgent problems all over the world, for which resources equal to more than 12.500 billion dollars have been put at disposal.

We will change the world by these means. More would be necessary, but it will be sufficient. We have very little time. Less than two years. But, we will make it, despite reactions, incomprehension, boredom and any attempt to prevent it. We will do what everybody considers necessary, useful and right.

We will make it possible. Together. First few, then many and at a certain point all (or almost).

July 3rd 2009.

Rodolfo Marusi Guareschi
